### Applications and use

Polyimide II Matt White is designed to withstand reflow processes regardless if the label is on top or bottom of the board. It can also withstand two cycles of reflow processes when surface mounting elements to both sides of the board. The product is also designed to be used in the wave solder process even when directly exposed to the solder bath. The matt topcoat had been formulated to prevent solder balls forming on top of the label.

S8088 was specially developed for labeling printed circuit boards prior to soldering.

### Conversion & printing

The topcoat is designed for thermal transfer and flexo printing. When used with an appropriate ribbon it will withstand temperature spikes up to +280 °C.
